AIRBUS

A success story in Alabama

Airbus is putting Alabama on the map as a **global aerospace hub**. In 2015, Airbus opened a major manufacturing facility in **Mobile, Alabama**, to assemble and deliver A320 Family single-aisle aircraft. It is the company's first U.S.-based aircraft production facility and strengthens the U.S. aerospace industry. Airbus delivered its first aircraft in April 2016 (an A321 to JetBlue) and is currently producing at least 50 single-aisle aircraft each year. The assembly line – a **\$600 million investment** – is part of Airbus' strategy to enhance its global competitiveness by meeting the growing needs of its customers in the U.S. and beyond.

Airbus has two other facilities in Mobile: an aircraft cabin Engineering Center as well as a customer services and maintenance support center for medium and light aircraft. Together, these three facilities employ approximately **1,000 people** and support thousands of indirect/supply chain jobs throughout the state.

Airbus announced in 2017 that it was partnering with Bombardier to acquire a majority stake in the new C Series aircraft. Alabama has been such a significant success story for Airbus that the company also announced that it would construct a second manufacturing line for the C Series aircraft in Mobile (pending final approval of the deal), investing at least **\$300 million** and creating at least **400 new, good-paying U.S. jobs**.
